

# Redefining Security with Scalable Threat Intelligence for MSSPs

Meet the Company

Scunna is a Managed Security Service Provider (MSSP) specialized in providing services and automating the processes of detecting and responding to cyber incidents.

## Life Before Threat & Exposure Intelligence

Before implementing Axur's Threat & Exposure Intelligence, Scunna faced challenges in monitoring external context threats for their clients. Despite having vulnerability management tools, they lacked a solution that combined threat identification with action planning, which had to be performed by an analyst.

## Empowering MSSPs with Threat & Exposure Intelligence

The introduction of Threat & Exposure Intelligence revolutionized Scunna's vulnerability management approach.

*"What sets Threat & Exposure Intelligence apart is how it delivers fully processed external threat information — already paired with the potential problem and possible solutions."*

**Paulo Reus, Operations Manager  
at Scunna's Cyber Defense Center.**

Moreover, the Operations Manager emphasized its advantage over other solutions:

*"A traditional tool in our daily routine only points out the problem, not the solution. Axur's Threat & Exposure Intelligence does both: it scans the environment, the infrastructure, and says: this threat exists, it's relevant to your setting, and here's what you can do about it."*

**Paulo Reus, Operations Manager  
at Scunna's Cyber Defense Center.**

## Life After Threat & Exposure Intelligence

One of the most impactful changes was the significant reduction in workforce needed to monitor and respond to threats.

*"Threat & Exposure Intelligence automates the work of an analyst. You no longer need to consult hundreds of information sources. Of course, someone will still need to validate the AI's insights, but it reduces both the number of people required for the task and the effort they'd need to put in."*

**Paulo Reus, Operations Manager  
at Scunna's Cyber Defense Center.**

With Axur, Scunna reinforces its position as a leading MSSP, proactively tracking and managing threats with automation, ensuring continuous defense against threats.

# About Threat & Exposure Intelligence

Axur's Threat & Exposure Intelligence brings the expertise of an elite Cyber Threat Intelligence (CTI) team into a powerful AI-driven platform.

It provides curated, actionable insights tailored to your attack surface, enabling MSSPs to respond faster, more effectively, and at scale.

## Key Benefits for MSSPs

### Time Saving

Scale threat screening by up to 180x, making analysts' day-to-day 33% more productive;

### Cost Reduction

Complete more projects in less time and focus key analysts only on what matters most;

### Optimized Decision-Making

Alerts come enriched with context and guidance, simplifying incident response;

### Revenue Growth

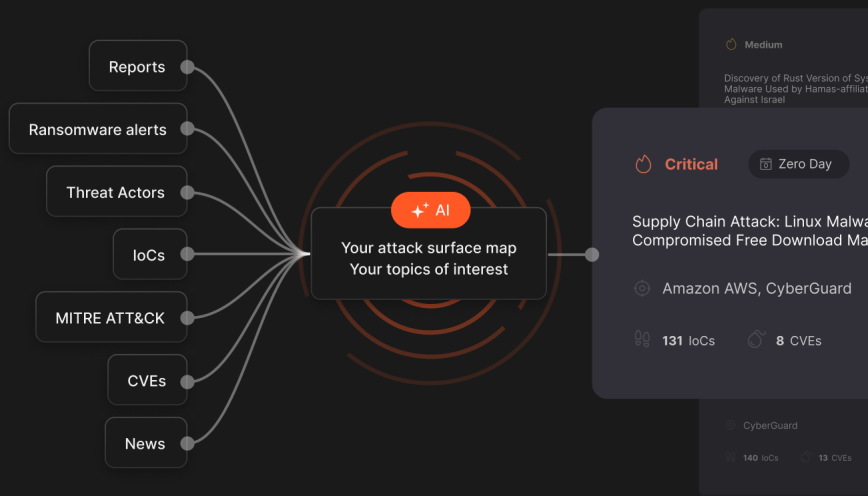

Increase project sales to existing clients with targeted analysis and response plans for real threats.

## How It Works

Every day, Threat & Exposure Intelligence scans thousands of sources for vulnerabilities, ransomware alerts, Zero-Day exploits, IOCs, CVEs, and threat frameworks like MITRE ATT&CK.

Its advanced large language model (LLM), enhanced with Axur's CTI expertise, summarizes each relevant attack or exposure and cross-references the data with your Attack Surface Map.

Only what really matters is sent to your dashboard — prioritized and ready for action.

Get a demo to experience the intelligence of a CTI team inside a powerful AI platform — and accelerate your business growth.
