

AI-enhanced brand protection: catch impersonations even without a single keyword mentioned

⚡ Eliminate them with the Best Takedown

Ensure your brand stays protected across websites, ads, social media, and any digital channel. Powered by Clair, Axur's proprietary Vision-Language AI, it detects what traditional systems can't by analyzing images, text, and page structure together, identifying fake sites, fraudulent ads, and impersonations with unmatched accuracy.

We add **40 million** new websites to our data lake daily. And use our **GenAI model** to inspect and enrich each signal.

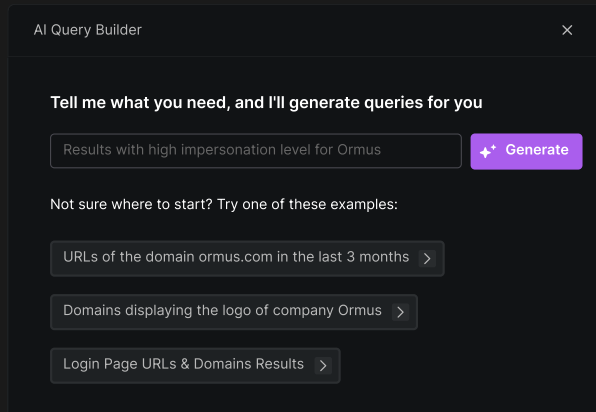

Protecting your brand, wherever threats surface

- URLs and Domains
- Malware
- Paid Search
- Social Media
- Fake Social Profiles
- App Stores
- And much more..

Proactively **take down** threats with agentic AI precision.

Take down scams that mimic your style, not just your name.

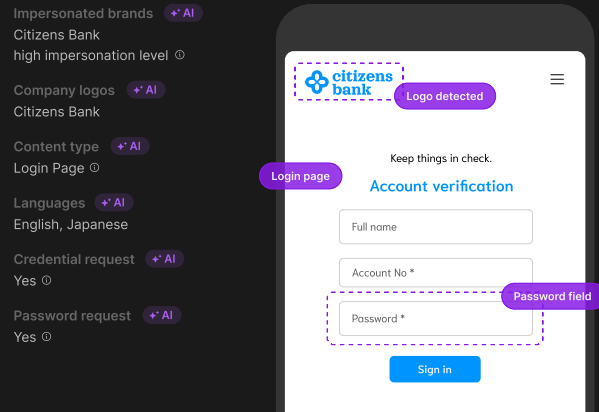

Our proprietary AI model detects brand abuse in visual assets like even when there are no keywords, logos, or direct references to your company.

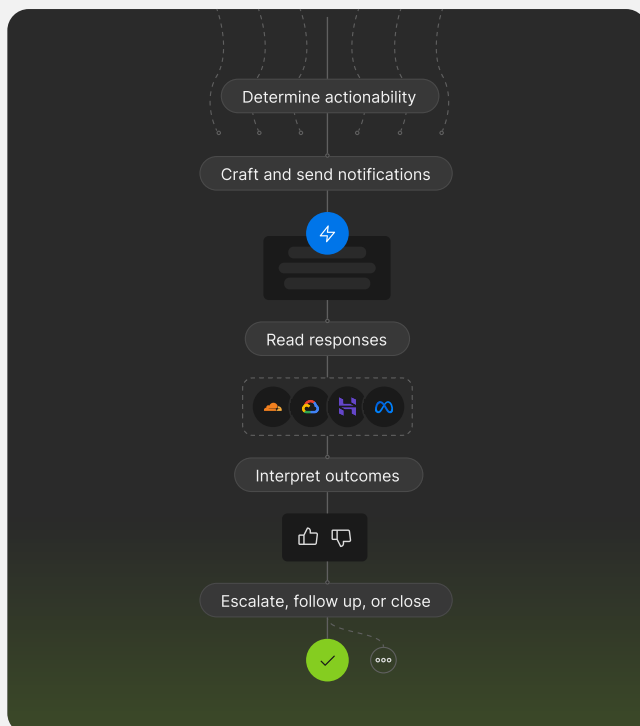

That's Clair ✨

Our VLM model behind it all.

Clair understands visual context, flags infringing content, and feeds those decisions into a fully agentic takedown workflow.

Only Axur has end-to-end **takedown workflows.**

From detection to decision-making.

Next, Axur's agentic takedowns kick in to:

- Determine if a threat is actionable — filtering out false positives, legit content, and fraud that falls outside enforcement scope.
- Craft and send notifications,
- Read responses from hosts and platforms,
- Interpret outcomes, and
- Act accordingly: escalate, follow up, or close.

All with minimal human input. This is what the next generation of takedowns looks like.

Yes - we have the world's **best takedown**. And here is the evidence:

- ★ Completely automated takedown 24x7
- ★ Notification in <4min
- ★ 98,9% success
- ★ 9h median uptime
- ★ 15-day stay down guarantee
- ★ Web Safe Reporting to +15 entities
- ★ Follow up the whole process
- ★ We charge only for successful takedowns

+1k takedowns per day
