

# Protect Your Digital Ecosystem by Eliminating External and Third-party Risks

## Problem

Protect your digital ecosystem against external threats and third-party vulnerabilities. As reliance on external partners for critical functions grows, the risk surface expands exponentially. Moreover, tracking your organization's internet-exposed systems becomes increasingly challenging due to their dynamic and intricate nature. Our security assessment is meticulously crafted to bolster your entire digital ecosystem. We provide real-time visibility and invaluable insights, enabling decisive and efficient actions to ensure comprehensive protection.

## Solution

Our Security Rating Services are crafted to fortify your digital ecosystem from external threats, offering real-time insights and actionable intelligence. With our solution, you can effortlessly map the external attack surface of your vendors and organization, streamline vendor integration by replacing outdated methods with continuous monitoring, utilize prioritized risk data for efficient resource allocation, proactively address vulnerabilities using security scores, and benchmark your security posture against industry peers and competitors, all within a consolidated framework.

## Structure of the Safety Assessment

### Challenge

### How Security Rating Services helps solve every challenge

Visibility of Risks	Gain visibility of the external attack surface of your suppliers and your own organization.
Supplier Integration and Auditing	Streamline and automate the onboarding of new suppliers and auditing of existing ones, replacing questionnaires and spreadsheets with continuous, objective monitoring with measurable results.
Risk Prioritization	Avoid wasted time and resources by consuming prioritized risk data according to the importance of the asset and the severity of the problem.
Vulnerabilities	Take a proactive and preventive approach, using scores to influence corrective actions before a vulnerability is exploited. Enhance collaboration by sharing action plans directly with suppliers, tracking their subsequent responses, and measures taken in real-time.
Market Analysis	Compare the performance of your organization's and your suppliers' security posture with competitors or industry peers.

## Security Rating

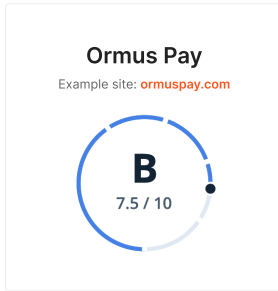

Gain insight into your external and third-party vulnerabilities to outsmart cyber threats.

### RiskRecon Rating

### Domain Ratings

Domain	Rating	Trend
Software Patching	C 6.2	-0.5 ↘
Application Security	F 2.8	-0.8 ↘
Web Encryption	F 2.8	-0.8 ↘
Network Filtering	B 7.0	+0.9 ↗
System Reputation	C 6.2	-0.8 ↘
Breach Events	B 7.0	+2.8 ↗

# Count on an in-depth assessment in the discovery and prioritization of your business risks

The Security Rating Services uses asset discovery based on automated, analyst-assisted learning models. This ensures accurate attribution of company assets as they change over time. In addition, each discovered asset gains a detailed profile, including software, IT infrastructure, geolocation, hosting providers, third parties, domains, systems and configurations.
